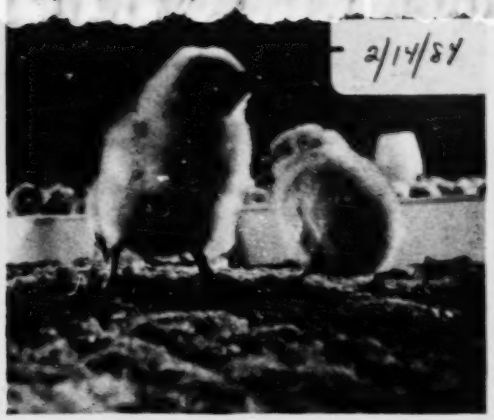
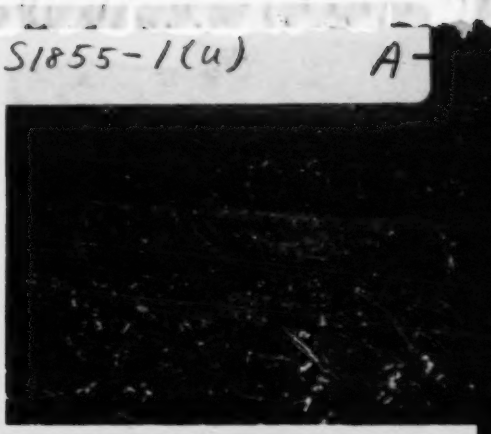
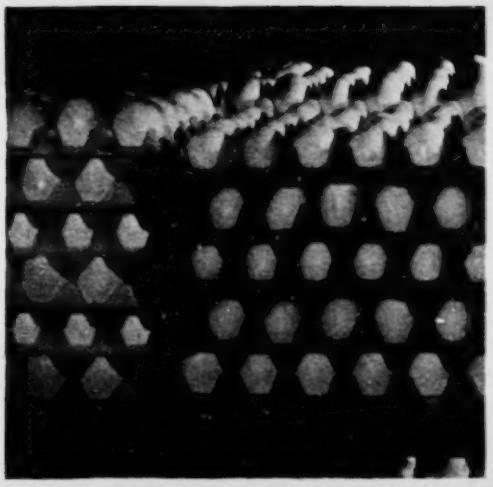
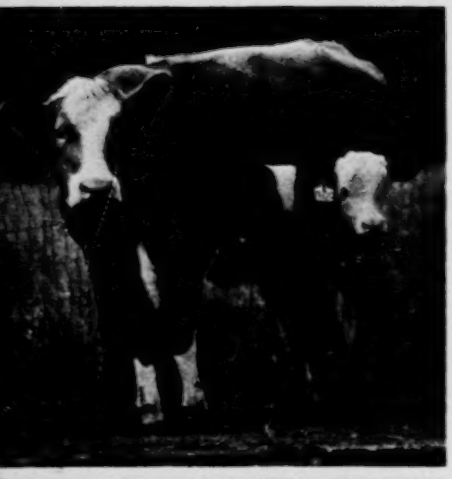
GEORGIA CROP REPORTING SERVICE









GEORGIA AGRICULTURAL FACTS

1983 EDITION

MESSAGE FROM THE COMMISSIONER

Dear Fellow Georgians:

Our farmers set several new production records in 1982, attesting to the efficiency and quality of Georgia farming.

Corn harvest ended with a record per acre yield of 85 bushels, and the soybean crop was another record at 68.85 million bushels. Cotton yields, which had never reached 500 pounds per acre since official estimates began being recorded in 1866, topped the previous record by 215 pounds for a 714 pound per acre average.

Access to information about yields, acreage and prices is important not only to farmers but to the entire agribusiness community if they are to plan properly for the best market opportunities. They must have a good understanding of what is happening over the State as a whole, and this is where the role of agricultural statistics plays so important a part.

The information contained in this book of agricultural facts is designed to help guide all those interested in agricultural production and, as an annual publication, has proven its worth through the years.

Published by the Georgia Department of Agriculture under a cooperative agreement with the Statistical Reporting Service, U. S. Department of Agriculture, this publication is dedicated to the continued growth and expansion of Georgia's agricultural resources.

Sincerely,

Tommy Irvin
Commissioner of Agriculture

FOREWORD

Data needs have become much more in demand because of the very serious nature of the current farm income problem. Use of information, as supplied in this publication, continues to increase on a daily basis. It is for this reason that the Georgia Crop Reporting Service is pleased to present this 1983 edition of "Georgia Agricultural Facts".

The farm income problem in Georgia is probably more severe than in most other areas of the Nation. There are many reasons for this, some of which go back ten years or more. The good years of 1973, 1974, and 1975 with favorable yields and prices encouraged expansion in acreage, and expansion in equipment and technology. The late seventies brought high inflation, rapidly increasing cost of production, and increasing inventories of farm products. But, the most devastating effects were probably from unfavorable growing conditions -- due to varying degrees of drought in 1977, 1978, 1980, and 1981. Coupled with poor yields, low prices, and high costs of production was a general economic recession, reduced demand for agricultural commodities, lower exports, and a strong dollar. These factors and others have put many Georgia farmers in an unenviable situation and has caused others to "simply walk away from the table".

Today's farmer is a combination of highly skilled technician and business manager who frequently applies more expertise and makes more demanding decisions than the manager of a factory or other business. To operate efficiently and effectively, farmers and others in agriculture require accurate information and reliable evaluations concerning production, supplies, marketings, prices, exports, weather and other inputs that make agriculture the Nation's biggest business.

The Crop Reporting Service is a key cog in the information system providing much of the basic statistical data used by producers in making management decisions. The analysis and interpretation of these basic statistics are performed by others, such as the University of Georgia Extension Specialists, private economists and the producer himself. Our role of providing the basic data is not taken lightly, and every effort within available resources is made to provide an accurate and timely product beginning with survey design and continuing through data collection, summarization, analysis and finally the release of each crop and livestock statistic.

We are indebted to thousands of voluntary reporters from the Georgia farming and agribusiness community. Each one unselfishly gives his time and effort to report various information that relates to his farm and business activities. Without this voluntary cooperation it would be impossible to make reliable estimates or compile this publication. Thanks to all of you who assisted in this effort.

Sincerely,

Larry E. Snipes
Statistician In Charge

CROPS

Highlights

Georgia's 1982 planting season had a "jack rabbit" start; stumbled through an extended wet spell, and finally finished about even with normal completion dates. Thanks to an unseasonably warm March, tobacco transplanting and early planting of crops like corn and watermelons, blasted out of the starting gate and streaked along at a record-fast pace until mid-April rains applied the brakes. The summer growing season, unlike several recent years, was relatively moist and crops responded very favorably. Mostly dry weather returned to the State for the fall harvesting season, which allowed timely gathering and thus, a reduction in harvesting losses. Together, the three favorable seasons teamed up to produce crops which had generally above average yields, with some setting record highs and others being near-record.

Corn Sets Low and High Records

The 1982 corn crop set two records, one low and one high. Acreage planted, at only 900,000 acres, was the least corn acreage seeded in the State since records began in 1866. It was, in fact, the first time since records began that the State had a crop of less than a million acres harvested for grain. The acres that were planted produced bountifully, however, and established a record-high yield.

The record yield of 85 bushels per acre, wasn't one of those record breakers that barely passes the previous record. The 1983 record yield was a full 20 bushels per acre above the previous record in 1979. Contributing to the record breaking yield, besides the good weather, were the facts that more productive land was used, and that a higher proportion of the total crop had irrigation capabilities. Thanks to the record yield, total production, at 69.3 million bushels, was up fractionally from the 1981 crop. However, a 19 cents drop in price, to $2.65 per bushel, lowered the total value of the crop by 6 percent to $183.6 million.

Four New Soybean Records

Four soybean records were established in 1982. They were: most acres planted; most acres harvested; largest production; and highest total value. The 1982 plantings, at 2.70 million acres, were 10 percent above the previous record set in 1980, and 17 percent more than the 1981 crop. Harvested acres in 1982 totaled 2.55 million and set a record that was a hefty 19 percent above the previous record, and 21 percent above last year. Yield, at 27 bushels per acre, wasn't a record in 1982 but it only missed tying the 1979 record yield by 1 bushel, and was 8 bushels, better than last year's yield. The favorable yield and expanded acres combined to lift production to a record 68.9 million bushels, 17 percent above the previous record in 1979, and a whopping 73 percent larger than the 1981 crop. Despite a 64 cents per bushel drop in the season average price, the expanded production elevated the total value of the crop to a record $375.2 million, only 1 percent above the record 1979 value, but 54 percent larger than the 1981 value.

Tobacco Acres Shrink

Continuing a downward trend that began a number of years ago, Georgia's tobacco acreage declined to only 50,000 acres harvested, the smallest harvested acreage since 1934. Production dropped 13 percent from 1981 to total 105.5 million pounds. Yield, at 2,110 pounds per acre, was the third best the State has been able to achieve. Quality of the 1982 crop was relatively high and brought a record high price of $179.60 per hundredweight. The higher price did not offset the reduced production, however, and the overall value of the crop slipped 4 percent to total $189.5 million.

Peanut Plantings At 22 Year Low

Plantings of peanuts in Georgia for the 1982 crop amounted to only 475,000 acres, making those plantings the least since the 1930 crop. This ignores interplantings with other crops which was popular during the first half of this century. Acres harvested for nuts in 1982 totaled 472,000. The 1982 yield, at 3,215 pounds, was sub-record, but very respectable. It was 80 pounds shy of the 1975 record, but was well above the 2,930 pounds yield in 1981. Production, at 1.52 billion pounds, kept Georgia far ahead of any rival as the leading peanut State. Average price dropped almost 3 cents per pound to 24.2 cents. The combination of weaker price and reduced production lowered the overall value of the crop to $367 million, off 18 percent from the 1981 value.

Cotton Shatters Yield Record

Georgia's cotton growers have never been able to average 500 pounds per acre since records began in 1866. That was the case until the 1982 crop. Not only did that phenomenal crop break that barrier, but it skipped over the 500's completely, and also the 600's, to soar to a statewide dream yield of 714 pounds. Acres harvested dipped 10 percent to 158,000 acres for the third lowest acres harvested of record. However, the super yield lifted production to 235,000 bales, the largest cotton crop since 1974. Average price rose slightly to 54.9 cents per pound, and helped to boost the total value of the crop to $61.9 million, a 49 percent increase over 1981.

Wheat Sets Three Record Highs

Record highs for Georgia wheat have had a very short lifespan during the past few years. The 1981 crop set five record highs, three of which were only one year old, and the 1982 crop surpassed those three again. The 1982 crop had the largest acreage ever planted; the largest acreage ever harvested for grain and the largest production. A record 1.59 million acres were planted, a 38 percent expansion over the 1981 seedings. Acres harvested for grain soared to 1.48 million, also up 38 percent. However, the 1982 yield per acre, at 33 bushels, was off 10 bushels per acre from the record yield in 1981. Even with that much yield reduction, the expanded acres lifted total production to 48.8 million bushels, a 6 percent increase. The average price of $3.05 was off 27 cents from the 1981 price. This held the value of the total crop to a sub-record $149 million, down 2 percent from the record high 1981 value.

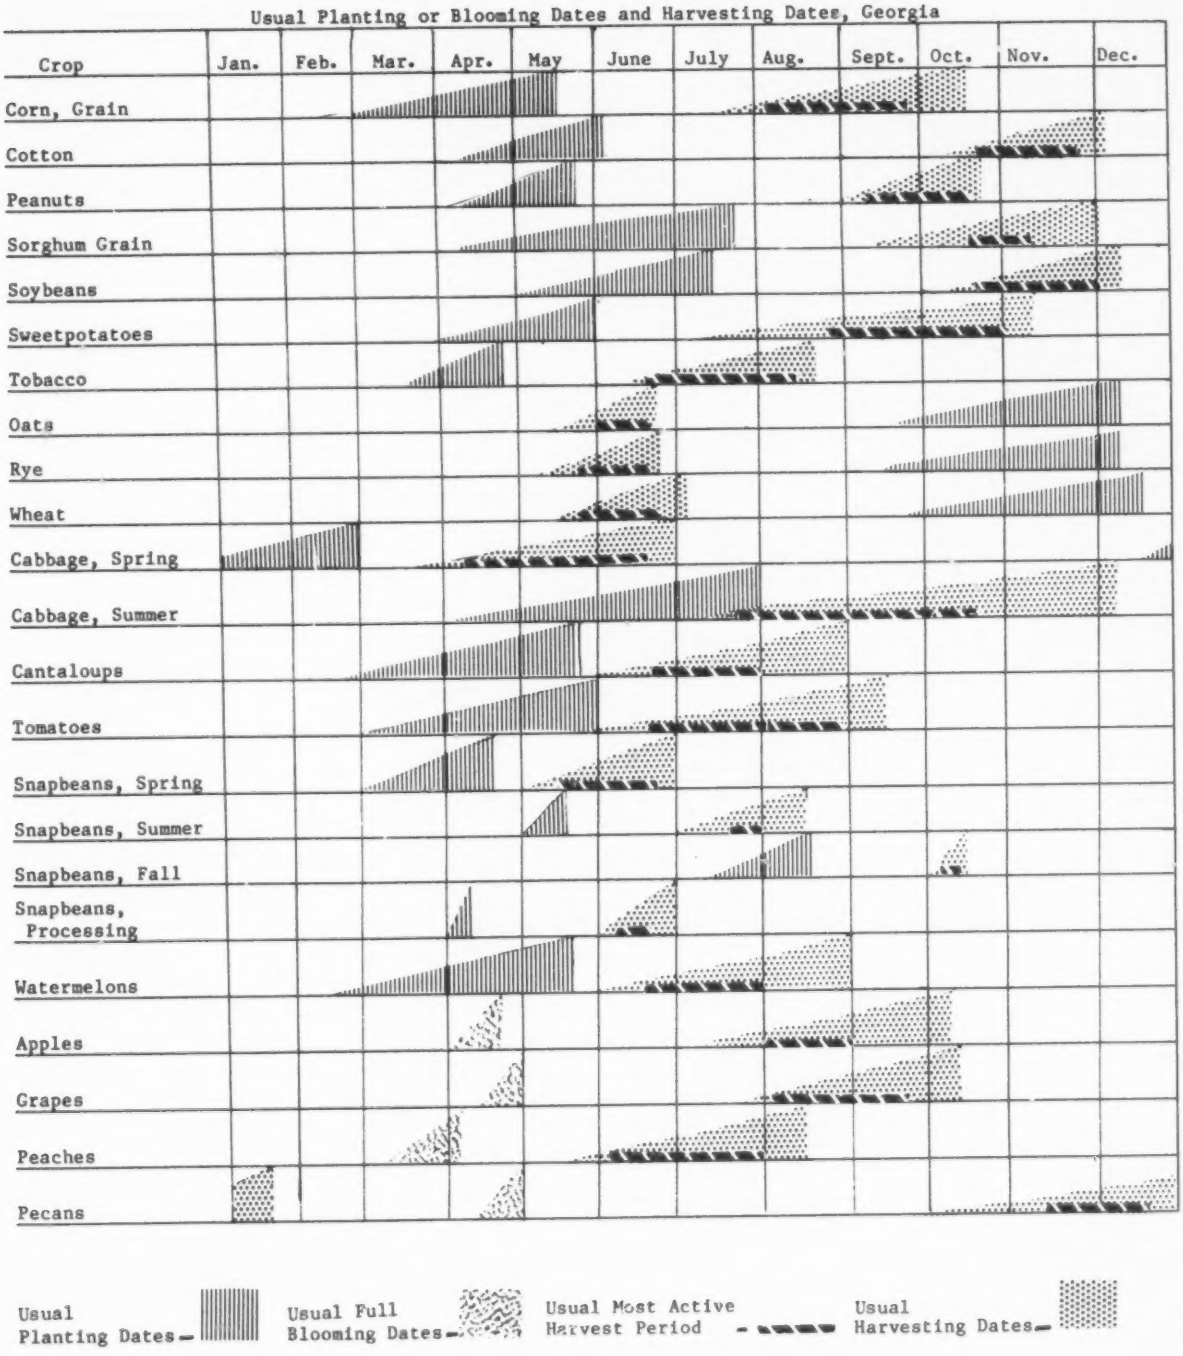
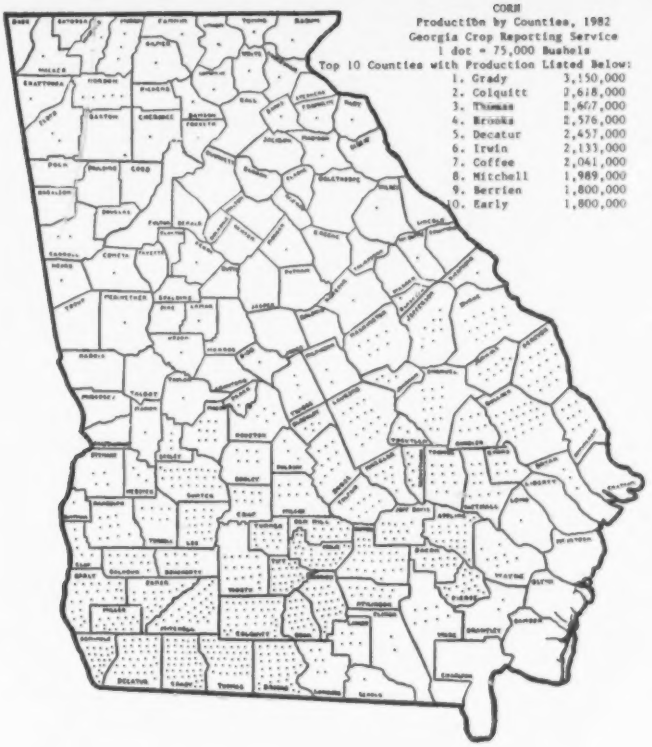
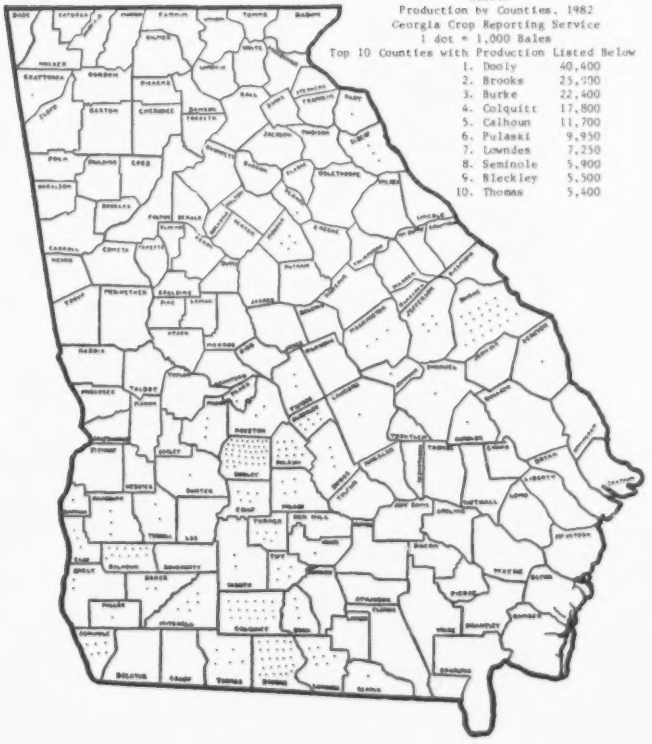
Usual Planting or Blooming Dates and Harvesting Dates, Georgia





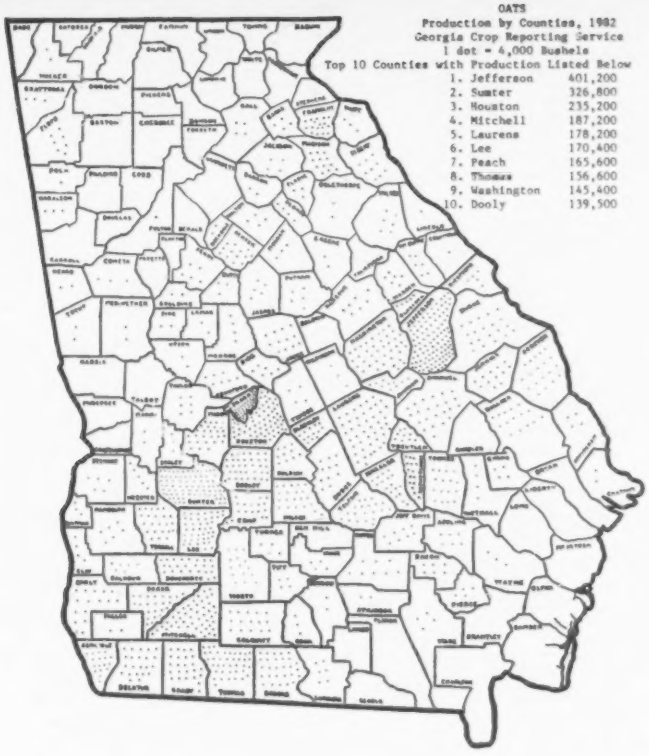
CORN
Production by Counties, 1982
Georgia Crop Reporting Service
1 dot = 75,000 Bushels
Top 10 Counties with Production Listed Below:

1.	Grady	3,150,000
2.	Colquitt	2,618,000
3.	Thomas	1,467,000
4.	Brooks	1,576,000
5.	Decatur	2,457,000
6.	Irwin	2,133,000
7.	Coffee	2,041,000
8.	Mitchell	1,989,000
9.	Berrien	1,800,000
10.	Early	1,800,000



COTTON
Production by Counties, 1982
Georgia Crop Reporting Service
1 dot = 1,000 Bales
Top 10 Counties with Production Listed Below

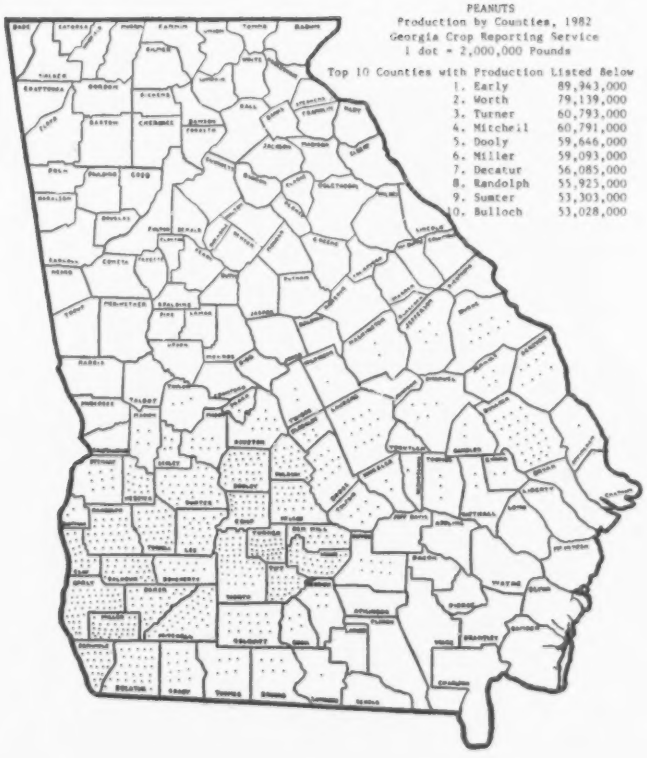
1.	Dooly	40,400
2.	Brooks	25,000
3.	Burke	22,400
4.	Colquitt	17,800
5.	Calhoun	11,700
6.	Pulaski	9,950
7.	Lowndes	7,250
8.	Seminole	5,900
9.	Bleckley	5,500
10.	Thomas	5,400



OATS
Production by Counties, 1982
Georgia Crop Reporting Service
1 dot = 4,000 Bushels

Top 10 Counties with Production Listed Below

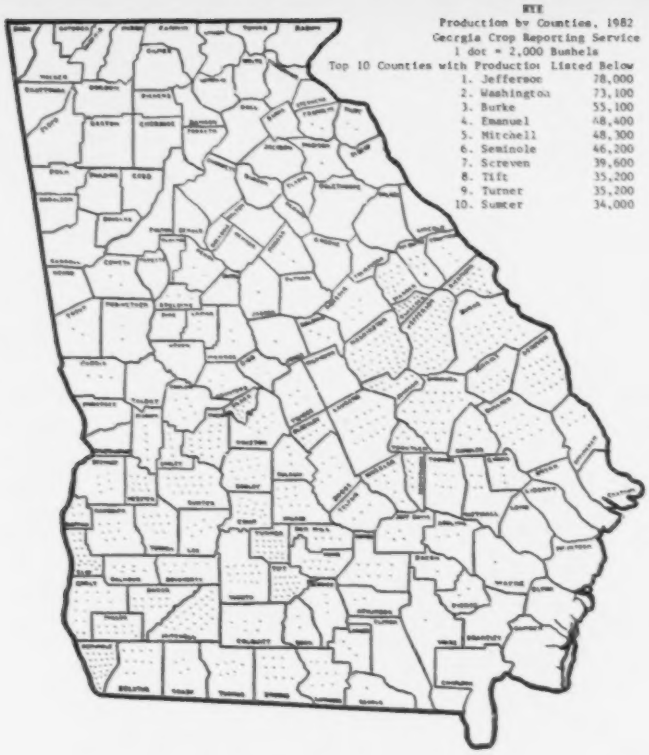
1.	Jefferson	401,200
2.	Sumter	326,800
3.	Houston	235,200
4.	Mitchell	187,200
5.	Laurens	178,200
6.	Lee	170,400
7.	Peach	165,600
8.	Thomas	156,600
9.	Washington	145,400
10.	Dooly	139,500



PEANUTS
Production by Counties, 1982
Georgia Crop Reporting Service
1 dot = 2,000,000 Pounds

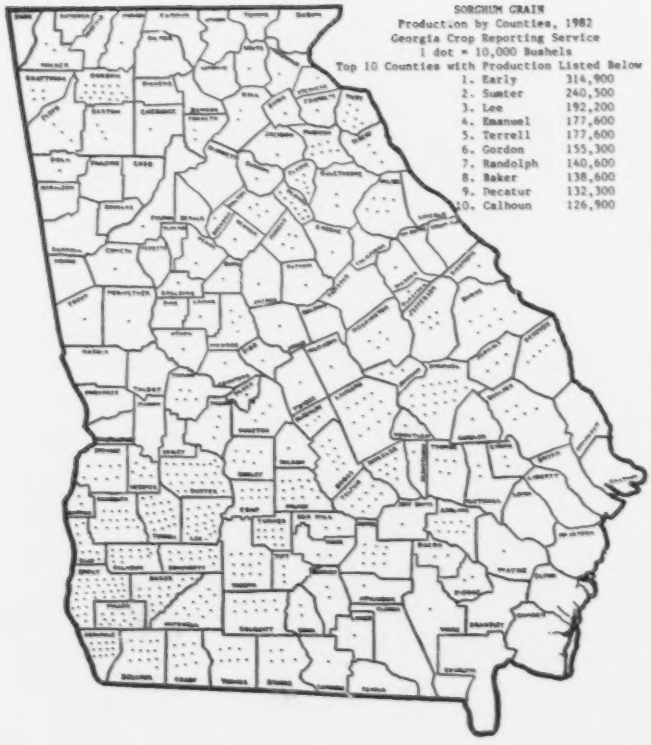
Top 10 Counties with Production Listed Below

1.	Early	89,943,000
2.	Worth	79,139,000
3.	Turner	60,793,000
4.	Mitchell	60,791,000
5.	Dooly	59,646,000
6.	Miller	59,093,000
7.	Decatur	56,085,000
8.	Randolph	55,925,000
9.	Sumter	53,303,000
10.	Bulloch	53,028,000



RYE
Production by Counties, 1982
Georgia Crop Reporting Service
1 dot = 2,000 Bushels
Top 10 Counties with Production Listed Below

1.	Jefferson	78,000
2.	Washington	73,100
3.	Burke	55,100
4.	Emanuel	48,400
5.	Mitchell	48,300
6.	Seminole	46,200
7.	Screven	39,600
8.	Tift	35,200
9.	Turner	35,200
10.	Sumter	34,000



SORGHUM GRAIN
Production by Counties, 1982
Georgia Crop Reporting Service
1 dot = 10,000 Bushels
Top 10 Counties with Production Listed Below

1.	Early	314,900
2.	Sumter	240,500
3.	Lee	192,200
4.	Emanuel	177,600
5.	Terrell	177,600

1/ Reported for sample fields used for obtaining objective yield data. 2/ Includes varieties with additional numerical designations such as Williams "79", Amsoy "71", Pickett "71", etc. 3/ Tied for first place. 4/ Tied for second place. 5/ Private variety. Includes all numerical variety designations marketed under company name.

Bragg retains title as the most popular soybean variety.

FRUITS AND NUTS

Highlights

Temperatures in early March were unseasonably warm and that was all that was needed to start fruit blossoms to swell and open, too soon as it turned out. Freezing temperatures returned to the northern half of the State in late March and again in early April, reducing fruit prospects to zero in many north Georgia orchards. For fruit growers in central and southern areas who escaped the two freezes, it was a mostly favorable year with generally adequate rainfall and prices well above 1981. The weather was also favorable for pecan production in 1982. Periodic rains during the growing season kept moisture supplies at favorable levels for most of the season in non-irrigated groves and reduced energy useage and cost for the irrigated groves. Harvest began on schedule in early October and progressed faster than normal except during a rainy period in late November when progress slowed to normal levels. The relatively humid conditions that existed in 1982 were conducive to scab formation and increased the importance of following a regular spraying routine to maintain control. Insect populations, especially aphids, were also difficult to keep under control in 1982.

Pecans Up 4 Percent, Second Largest Ever

For the third consecutive year, Georgia's pecan crop showed an increase over the previous year. This upward spiral raised the 1982 crop 4 percent to 125 million pounds, the second largest pecan crop the State has ever produced since records began in 1919. The record crop of 135 million pounds was produced in 1978. The 1982 crop continues a trend away from the cyclic pattern of alternating "on year-off year" that is evident in earlier pecan production history. Some observers attribute this to improved management practices, including the rapid expansion of irrigation, and also to younger groves coming into production. Georgia continues to be the undisputed champion among the Nation's pecan producing states and is, in fact, increasing the margin between itself and all other contenders.

The average price paid for the 1982 crop increased 14 percent to 63.7 cents per pound. This was 7.9 cents per pound more than was received for the 1981 crop, but was 14.7 cents per pound less than the 1980 crop. The total value of the 1982 crop was $79.6 million, 19 percent above the 1981 crop. This places the 1982 crop in second position among the most valuable pecan crops ever produced with only the 1980 crop having a higher total value.

Peach Production Surprising

The volume of Georgia's 1982 peach crop was much better than was expected early in the season following those two devastating freezes. When harvest was over, grower surveys and shipment check-data revealed that 120 million pounds of peaches had been produced in central and south Georgia with very little production from northern areas. Utilized production, at 110 million pounds, was only 12 percent less than the freeze-free 1981 crop. With production off sharply in South Carolina, peach supplies for fresh market were short and this helped boost Georgia's average price to 20.4 cents per pound, the second highest average price ever received for Georgia peaches. The high price more than made up for the reduction in production and lifted the value of the crop to $22.5 million, the second most valuable peach crop on record, and 52 percent more valuable than the 1981 crop.

Apple Crop Off Two-Thirds

Proportionally, Georgia's apple crop was hurt much worse by the freezes than was the peach crop. Since much of the apple acreage is located in the area affected most by the freeze, the crop was cut by two-thirds from the previous year and amounted to only 15 million pounds. Utilized production was 14 million pounds, the smallest of record back to 1976. There was a 16 percent rise in price in 1982 to average 10.8 cents per pound. An increase in the proportion of the crop going for processing kept the average price received by farmers from rising more. The overall value of the crop totaled $1.52 million, off 59 percent from 1981, and the smallest value since estimates began in 1976.

Grape Estimate Published

Grape estimates for Georgia have not been published since 1972 to avoid disclosure of individual operations. That situation has corrected itself and publication of the grape estimate was resumed in 1982. A crop of 2,800 tons was produced in the State and 2,600 tons were utilized. The average price, considering both fresh market and processing grapes, was $473 per ton. This means the overall value of the 1982 crop was $1.23 million. The Georgia Legislature approved the operation of commercial wineries in the State during the 1982 session and a rapid expansion of grape production is predicted by some sources in the industry.

POULTRY

Highlights

Weaker consumer demand for eggs and larger production of broilers and chickens in the United States caused a decline in poultry gross income. The decrease in egg production was due to producers reacting to the lower egg prices as more table egg hens were sold than a year earlier. The average number of layers declined each quarter during 1982, but productivity per hen was unchanged from last year.

Prices received for broilers, spent hens from hatchery flocks and all eggs were all below the previous year prices. Prices received for turkeys were above 1981 prices.

The gross income from all chickens and eggs including broilers amounted to $953.6 million for the 1982 production year, down from the record high of $1,020.6 million during 1981. Georgia still ranks first in the Nation in gross income from all chickens and eggs including broilers, but excluding turkeys. The State ranks below only California in earnings from eggs and second to Arkansas in earnings from broilers. Gross income from broilers produced in Georgia during 1982 totaled $610.7 million, down 4 percent from the $635.3 million in 1981. The weak prices for Georgia eggs in 1982 cut the gross income $41.9 million from the $345.4 million in 1981, a 12 percent drop.

Broiler Production Falls

Georgia, which produced about 15 percent of the Nation's broilers in 1982, production was 610.7 million birds during the marketing year, December 1, 1981-November 30, 1982, down 1 percent from the 614.7 million produced the previous year. Georgia produced 2.44 billion pounds of broilers in 1982 compared with 2.40 billion pounds a year earlier.

The number of spent fowl sold from Georgia's laying flocks in 1982 totaled 21.4 million, down from the 22.3 million sold the previous year. A total of 632.2 million spent hens and broilers were sold for slaughter in 1982, down 1 percent from 1981.

Prices in 1982 averaged 25.0 cents per pound for broilers, compared with 26.5 cents per pound in 1981. The average price for spent hens was 12 cents per pound, 1/2 cent less than 1981.

Egg Production Down

Georgia's egg production during the year ending November 30, 1982 totaled 5.4 billion eggs. This was 3 percent less than the 5.6 billion produced in 1981. During 1982, the average number of layers was 22.1 million or .7 million below the 22.8 million in 1981. The average number of layers in hatching egg flocks during 1982 was 5.4 million, 2 percent more than 1981. The average number of layers in other flocks was 16.7 million, down 4 percent from 1981. Georgia's layers produced an average of 245 eggs in 1982, unchanged from 1981. Hatching egg producers sold 1.2 billion eggs during 1982 of which 85 million were sold as table eggs and 1.1 billion for hatching. Producers of table eggs sold 4.2 billion eggs during 1982 bringing the total eggs sold to 5.4 billion.

Sale of commercial eggs was 64 percent of the total cash receipts from eggs in 1982 while hatching eggs made up the other 36 percent. The average price per dozen for all eggs during 1982 was 67.2 cents. This was 7.1 cents less than the 1981 average price.

Turkey Crop Declines

During 1982, Georgia's turkey producers raised 2.68 million poults, down 2 percent from the record level of 2.73 million in 1981. Only heavy breed turkeys are raised in Georgia. Turkey production in 1982 totaled 62.2 million pounds live weight, 5 percent below the 1981 level.

The value of Georgia's 1982 turkeys increased slightly to $25.49 million from $25.48 million in 1981. All of the increase came from higher prices because the number of turkeys raised declined 54,000 head and the number of pounds produced fell 3.2 million. The live weight price in 1982 was 41 cents per pound, up from 39 cents in 1981.

LIVESTOCK AND DAIRY

HIGHLIGHTS

Livestock inventory numbers at the end of 1982 in Georgia were down from 1981 for both cattle and hogs. Cattle numbers reversed their upward movement of the past two years while hog numbers marked their third straight year of decline. Excellent price gains were made by hog producers with the price received per hundredweight moving from $43.10 for 1981 to $51.90 for 1982. Cattle prices, however, declined slightly from $46.80 per hundredweight last year to $46.00 for 1982.

At the end of 1982, Georgia ranked 24th nationally in the number of cattle and calves and 11th in hogs and pigs. The State placed 22nd in milk production. The number of hog farms in Georgia at 16,000 was down 2,000 from the previous year while the number of cattle farms at 41,000 was up 1,000. The number of farms with milk cows declined from 3,100 on January 1, 1982 to 2,900 on January 1, 1983. Cash receipts for dairymen and livestock producers totaled $690.7 million for 1982, down 2 percent from the previous year.

CATTLE

All cattle and calves in Georgia as of January 1, 1983, totaled 1,875,000 head, down 4 percent from last year's total of 1,950,000 head. Cash receipts from the sale of cattle and calves in 1982 at $242.4 million were up 14 percent. This is the third highest total on record, exceeded only by the $258.9 million in 1978 and the $309.3 million in 1979. The increase in cash receipts for 1982 resulted entirely from additional marketings as the average price was slightly below 1981. The January 1, 1983 inventory value of all cattle and calves on Georgia farms was set at $646.9 million, an increase of less than 1 percent from the January 1, 1982 value. The value per head was $345, up $15 from the previous year.

The 1982 calf crop totaled 840,000 head, down 10,000 from last year's level of 850,000. The two leading counties in total cattle for Georgia were Colquitt with 38,300 head and Morgan with 32,900.

HOGS

There were 1,400,000 hogs and pigs on Georgia farms on December 1, 1982, down 8 percent from the previous year. Breeding inventory increased 6 percent to 217,000 head with market hogs declining 10 percent to 1,183,000 head. Cash receipts for hogs at $247.5 million for 1982 were down 15 percent from the $289.5 million for 1981. The decrease in cash receipts was due entirely to the sharply reduced marketings in 1982. Average value of hogs and pigs on hand December 1, 1982 was $89.00 per head, up $25.50 from the preceding year. The total value of the hog inventory on that date was $124.6 million compared to $96.5 million for a year earlier.

Georgia pork producers had 294,000 sows to farrow from December 1, 1981 through November 30, 1982, down from the 345,000 sows farrowing during the same period of a year earlier. The average number of pigs saved per litter was 7.09, resulting in a pig crop of 2.1 million, down 16 percent from the previous year's pig crop. Colquitt County, with 76,000 head, continued to be the leading county in the State in hogs and pigs.

MILK PRODUCTION

Georgia's dairies produced an estimated 1.4 billion pounds of milk during 1982, up 1 percent from last year. There was an average of 131,000 milk cows on farms across the State compared to 130,000 for 1981.

The annual average milk per cow was 10,779 pounds, up slightly from last year's average of 10,738. Cash receipts from marketings at $200.9 million were down 1 percent from the previous year. Morgan County leads Georgia in the number of milk cows with 9,400 head. Putnam County follows with 8,700 head.

RED MEAT PRODUCTION

Slaughter plants in Georgia produced 434.7 million pounds of red meat (beef, veal, pork and mutton) during 1982, a decrease of 2 percent from 1981.

Production of beef was up 3 percent from last year while pork production was down 3 percent.

CATTLE AND CALVES—NUMBER ON FARMS AND VALUE, JANUARY 1, GEORGIA, 1977-1983

Year	All Cattle and Calves	Value

NUMBER OF GEORGIA PRODUCERS MARKETING MILK THROUGH FEDERAL ORDERS DURING DECEMBER 1982

Producers in Catoosa, Walker and Whitfield Counties are in Tennessee Valley Federal Order but market milk in Georgia Federal Order.

Producers in Berrien, Brooks, Colquitt, Cook, Decatur, Grady, Houston, Lamar, Laurens, Lee, Lowndes, Macon, Mitchell, Monroe, Morgan, Pierce, Pulaski, Putnam, Randolph, Schley, Seminole, Thomas, Ware, Wayne, Webster and Worth Counties market milk in Georgia and Upper Florida Federal Orders.

There are 58 counties in Georgia Federal Order with less than 3 producers each who are not listed.

FARM INCOME, PRICES AND EXPENSES

Highlights

Gross farm income for Georgia farmers in 1982, at $3.53 billion, was down 2 percent from the revised 1981 gross income estimate. However, farm production expenses dropped 3 percent from 1981 to $3.03 billion. This gave a net farm income estimate, after allowances for changes in inventory values, of $559.5 million, 2 percent above 1981. Gross income per farm averaged a record high $60,797, up about 1 percent from the previous record high in 1981. Net income per farm averaged $8,515, up 5 percent from the $8,082 average of 1981, but still 26 percent below the record high of $11,440 in 1978.

Cash Receipts

Total cash receipts from farm marketings and government payments received by Georgia farmers in 1982 totaled $3.24 billion, 2 percent less than 1981. Receipts from the sale of livestock, poultry and their products declined 5 percent to $1.66 billion. Commercial broilers again were the leading source of cash receipts with $610.7 million, and accounted for 18.9 percent of the total. Eggs made up 9.4 percent to rank fourth and hogs ranked fifth with 7.6 percent of the total receipts.

Cash receipts from the sale of crops totaled $1.55 billion, up 1 percent from 1981. Peanuts continued as the leading cash crop with 10.7 percent of the total, despite dropping 20 percent in total receipts from 1981 to $346.8 million. Soybean receipts totaled $304.0 million, an increase of 31 percent from 1981 and ranked third overall, just slightly ahead of eggs. Government payments at $29.3 million were 23 percent less than 1981.

1982 Farm Production Expenses

For the first time since 1968, total farm production expenses of Georgia farmers declined from the previous year. Production expenses in 1982 totaled $3.03 billion, 3 percent less than the revised 1981 estimate of $3.11 billion. The most significant decline was fertilizer and lime which totaled $229.7 million, a whopping 20 percent below the $286.3 million in 1981. Feed continued as the largest expense item, accounting for 20 percent of the total, and at $608.6 million, was 10 percent less than 1981. Miscellaneous items, at $600.1 million, were 3 percent less than last year. Some of the items included as miscellaneous expenses are federal crop insurance, electricity, irrigation, pesticides, veterinary services and medicines and interest on production loans. Hired labor led the way in items that increased from 1981 with expenses totaling $232.8 million, an increase of 19 percent. Interest on the farm mortgage debt jumped 14 percent from last year to $248.8 million.

Balance Sheet For 1983

The Georgia balance sheet for January 1, 1983 shows total farm assets at $17.55 billion, only fractionally below the $17.59 billion a year ago. Claims against assets totaled $4.88 billion in 1983 compared to $4.87 billion in 1982. This resulted in equity for 1983 dropping slightly to $12.67 billion from $12.71 billion in 1982.

Real estate assets were responsible for the small decline in total farm assets, as real estate dropped 3 percent to $12.42 billion. Offsetting the drop in assets were increases in livestock, machinery, crops, household equipment and financial assets.

On the claims side, real estate debt was up 1 percent and CCC loans up 73 percent, while the nonreal estate debt dropped 2 percent from 1982.

Prices Received By Georgia Farmers

Prices farmers received for steers and heifers averaged $53.00 per hundredweight in 1982, a drop of $1.20 from 1981. With the exception of November and December, prices for slaughter cows were below 1981 throughout the year and averaged $38.60 per hundredweight for the 1982 marketing year. Calf prices in 1982, at $53.10 per hundredweight, also averaged less than the 1981 marketing year average of $56.00. Milk prices averaged $14.40 per hundredweight for the marketing year, $.30 below the 1981 average of $14.70. Milk cow prices averaged $1,110 for the four quarters in 1982 compared to $1,200 for the 12 months of 1981. Broiler prices dropped to 25.0 cents per pound and other chickens averaged 12.0 cents, .5 cent less than 1981. Prices for all eggs at 67.2 cents were 7.1 cents less than 1981. On the brighter side, hog prices in 1982 improved significantly from 1981and averaged a record high $51.90 per hundredweight. This was $8.80 more than the 1981 marketing year average, and $7.90 more than the previous record of $44.00 set in 1978.

Prices farmers received for most major crops in 1982 fell below the season averages of 1981. Tobacco, peaches and pecans were the only crops with any significant increase in price from 1981, with cotton lint showing only fractional improvement. Corn prices during 1982 were well below the comparable months of 1981. The season average price for the 1982 crop was $2.65 per bushel compared to $2.84 for the 1981 crop. Soybean prices were also below 1981 throughout the year and the season average price was $5.45 per bushel, $.64 less than the 1981 crop. Peanuts, the State's leading cash crop, averaged 24.2 cents per pound for the 1982 crop compared to 27.0 cents in 1981. Wheat prices, averaged $3.05 for the season, down 27 cents from 1981. Grain sorghum averaged $3.50 per hundredweight, compared to $3.87 in 1981. Rye prices dropped 84 cents per bushel in 1982 to $2.35 and oats were 29 cents lower for the 1982 crop at $1.55 per bushel. Tobacco prices in 1982 increased $17.10 per hundredweight to $179.60. Prices for peaches from the freeze damaged 1982 crop were up sharply from the previous year to 20.4 cents per pound. Pecan prices averaged 63.7 cents per pound, up 7.9 cents from the 1981 season. The 1982 season average price for cotton lint was 54.9 cents per pound, only .6 cent more than the 1981 price of 54.3 cents.

Prices Paid By Georgia Farmers

Average prices paid by Georgia farmers in 1982 for commodities and services were generally above 1981, but rose at a much slower pace than in recent years. Feed prices and prices for motor supplies, services and fuels actually declined from 1981. Feed prices were about 8 percent less than 1981, and motor supplies and fuels averaged about 2 percent less. The largest increases came from farm machinery and farm supplies, both of which averaged about 8 percent more than 1981. Prices paid for fencing materials and pesticides were up about 4 percent and fertilizer and building material prices each averaged about 1 percent more than 1981.

GENERAL

Weather and Crop Summary, 1982

Georgia's weather during the first two months of 1982 was very wet. This built soil moisture supplies to favorable levels and set the stage for a very early and rapid start of the planting season. March cooperated by being unseasonably warm and dry. Planting of the early spring planted crops streaked along at a record fast pace until freezing weather in late March and again in early April slowed progress, and also killed most of the north Georgia fruit blooms that had been lured out by the earlier warm period. Mid-April rainfall slowed planting progress significantly, but earlier progress was so rapid that farmers were still ahead of normal with planting at the end of April. Moisture supplies were generally favorable during much of the growing season. Rainfall during the fall was near normal, which allowed harvest to advance uniformly and minimized harvesting losses. Yields were generally favorable with several crops setting records and others being near record levels.

January

Early January brought cold wet weather into Georgia. A slight moderation in temperature was quickly reversed by bitter cold weather on the 9th and 10th, with record lows on the 10th. Temperatures averaging 15-20° below normal statewide were accompanied by snow, sleet and freezing rain over the northern two-thirds of Georgia in mid-January. The average temperature for Georgia in January was 42.7 degrees, 4.2 degrees below normal. Georgia precipitation averaged 5.28 inches, 1.13 inches above normal. By the end of the month, soil moisture was adequate to mostly surplus in the State. Land preparation was slightly behind schedule due to wet conditions and livestock were in fair to mostly good condition.

February

Warmer weather statewide and heavy rainfall in north and west Georgia occurred in early February. Field activity was still being restricted due to wet weather in mid-February. By the end of the month, soil moisture was rated from mostly adequate to surplus with field activity on the increase in the southern two-thirds of the State as soils dried. Tobacco plants were rated in good condition and corn planting had begun in the southern areas. Dormancy requirements for peaches were satisfied during February. The north Georgia mountains closed the month with cold, snowy weather, with some areas receiving as much as 7.00 inches of snow. Georgia precipitation averaged 6.15 inches, 1.73 inches above normal for the month. Temperatures in the State averaged 50.9 degrees, 1.8 degrees above normal.

March

March began with cool wet weather over much of the State. Soil temperatures were at or above normal in the southern two-thirds of the State but below normal in the northern third during the first two weeks of March. Warm weather and generally favorable moisture conditions followed. Corn planting and tobacco transplanting were at a record pace by mid-March. Watermelon planting was also at a record pace. The unseasonably warm weather in March caused fruit trees to bloom much earlier than normal. Many peach and apple groves were caught by a March freeze on the 27th and 28th, which damaged much of the crop in the northern one-fourth of the State. By late March, corn, tobacco, watermelons, wheat and pastures were in fair to good condition. The average temperature in March despite wide fluctuations was 58.4 degrees, 3.4 degrees above normal. Rainfall in the State averaged 2.57 inches, a full 3.00 inches below normal for the month.

April

The weather in Georgia during April was primarily cool and wet. This led to a decrease in the planting pace for most crops and generally decreased the growth and germination for many row crops. On April 7th, new record low temperatures were set at several locations. The freezing temperatures caused heavy damage to the peach and apple crops. Damage was the most extensive in north Georgia although many orchards in the central portion of the State reported freeze damage as well. Soil temperatures were mostly below normal during the first part of April. High soil moisture levels slowed field activities but was just the right medicine for pastures which were generally in good condition by late April. At the end of the month, planting progress for corn was slightly ahead of average but behind last year. Tobacco transplanting was completed at month's end, ahead of both last year and average. Planting progress of most other row crops was running ahead of 1981. Temperatures for the State averaged a cool 60.9 degrees, 3.2 degrees below normal for the month. Rainfall over the State averaged 6.48 inches, 2.29 inches above normal.

May

The cool wet weather in early May was quickly replaced by more favorable conditions. Planting of late crops increased rapidly and farming activities were heavy over most of the State. However, a period of 3 weeks with little or no rain resulted in soil moisture shortages in many areas. Abundant rainfall the last week of May greatly improved the conditions of most row crops and pastures in Georgia. Disease and fungus in wheat were still a problem at harvest time, as it had been for much of the spring. Central Georgia peaches which had escaped the freeze, were moving to market in volume by late May. Sweet onion marketing was heavy in the Vidalia and Glennville areas. At the end of the month hogs and cattle were in good condition. Wheat harvest, at the end of May, after a fast start, was behind last year due to widespread showers and thunderstorms. Average rainfall for Georgia in May was a meager 2.99 inches, .91 inches below normal. Temperatures for the State averaged near normal for the month at 71.6 degrees, .2 degrees above normal.

JUNE

Crops throughout the State were in generally good condition in early June. Except for a few scattered dry spots, most areas of the State received ample rainfall during the month. Wheat harvest picked up speed by the second week of June with progress near average the rest of the month. Peach harvest, after a fast start, settled down to a near normal pace which moved harvest progress to nearly two-thirds complete by the end of June. Most row crops were looking good by late June, especially cotton, corn and peanuts. In late June, most pastures throughout the State were in good condition. Cattle and hogs were also in good condition. The average rainfall in Georgia for June was 4.81 inches, .50 inches above normal. Temperatures for the State averaged 77.0 degrees, .5 degrees below normal.

JULY

July 1982 provided a welcome change from recent July's as rainfall averaged slightly above normal. The rains came early in the month and never let up. There was ample soil moisture in nearly all areas of the State. Corn harvest was setting record yields but harvest progress was behind normal at month's end. However, as usual, the heavy rains brought mixed blessings. Wheat harvest was delayed some, causing the late planting of many soybeans. Field activities were slowed as the rains limited the number of days suitable for fieldwork and leached out fertilizer and simply washed away insecticides and fungicides. Peanuts were in good condition at the end of the month with development slightly ahead of both last year and average. Peaches were all harvested except for about 5 percent of the crop. For the month of July, rainfall averaged 6.05 inches, .41 inches above normal. Temperatures in Georgia averaged 79.3 degrees for the month, .3 degrees below normal.

AUGUST

General rains continued into early August, some of which were locally heavy. Early in the month most counties had adequate or surplus soil moisture. Insects and disease were still prevalent, threatening some very good crop prospects. In peanuts, white mold was still a problem and leafspot was causing some growers to dig earlier than they would have preferred. The high humidity was also conducive to increased disease problems in the pecan crop causing producers to spray more than usual. August ended on a dry note with soil moisture supplies dropping to a level where half the counties were reporting shortages. Corn harvest progress was nearing two-thirds completion, well ahead of average but behind the record pace of 1981. Tobacco harvest was virtually complete and apples were over two-thirds picked. Rainfall in August averaged 3.64 inches, .89 inches below normal. The average temperature for the month was 78.0 degrees, 1.2 degrees below normal.

SEPTEMBER

Georgia weather in September was primarily cooler and drier than normal. Rainfall consisted mainly of scattered showers throughout the month. Soil moisture conditions in most areas of the State were rated as short to very short during the month, especially in north Georgia. Peanut harvest was in full swing in September and was about two-thirds finished at the end of the month. Corn harvested at the end of September was over 90 percent complete, about equal to the 1981 pace, but well ahead of average. Wheat planting was being delayed late in the month due to the lack of adequate soil moisture. Lack of adequate moisture was also becoming critical for late planted soybeans. Rainfall in September was a sparse 2.97 inches, 1.12 inches below normal. Temperatures for the month were cooler than normal averaging 72.3 degrees, 2.0 degrees below normal.

OCTOBER

North Georgia was relatively cooler and wetter than normal while south Georgia was slightly warmer and drier than usual. The first few days of October saw soil moisture supplies drop to a level equaling the lowest for the year. However, rains the next two weeks over north Georgia greatly improved soil moisture supplies but most of south Georgia remained dry. Wheat plantings ran behind normal progress the entire month and at the end of the month plantings had reached one-fourth complete. The dry weather aided harvest in south Georgia but was causing some problems for pastures and fall plantings. Peanut and corn harvests were virtually complete in October with good yields in peanuts and record yields for corn. Rainfall averaged near normal for the month with 2.79 inches, .07 inches above normal. October temperatures also averaged near normal for the month at 64.2 degrees, .4 degrees below normal.

NOVEMBER

Early in November, rainfall continued the trend of earlier weeks with slightly above normal amounts. Soil moisture conditions continued surplus in the north and short in the south. Soybean and pecan harvest made good progress during the month with soybean harvest progress over four-fifths complete and pecan harvest approaching the three-fourths mark. Harvesting progress of the record yielding cotton crop was lagging slightly behind average. Georgia rainfall averaged 3.96 inches, 1.04 inches above normal for November. Temperatures in the State averaged 56.8 degrees, 2.4 degrees higher than normal.

DECEMBER

Warmer and wetter than normal weather continued into early December. Temperatures in the State during the first week of the month averaged as much as 10 to 15 degrees above normal. Soil moisture supplies were surplus over the northern third of the State while there was considerable flooding in the northwest. By late December, pecan and soybean harvests were near completion while tobacco bed preparation was well underway. Extreme south Georgia peach producers were becoming concerned with the lack of chill hours in their region. Rainfall in December was above normal averaging 6.45 inches, 2.14 inches above normal. Temperatures also averaged well above normal at 53.0 degrees, 5.7 degrees on the plus side.

1/ Quarterly estimates discontinued after April 1981. 2/ Excludes agricultural service workers. 3/ Includes as "other family" only those household members working 15 hours or more per week without receiving cash wages. 4/ Insufficient data for this category.

ESTIMATES ISSUED BY GEORGIA CROP REPORTING SERVICE

Current estimates of many data items included in this publication are available from the Georgia Crop Reporting Service at various times throughout the year. The table below indicates the months data are available. Current data may be obtained by calling the Crop Reporting Service or interested persons may be added to one or more of our five mailing lists. The five separate mailing lists are: (1) Weekly Weather and Crops, (2) Weekly Broiler Report, (3) Georgia Agricultural Facts, (4) Georgia Poultry Facts and (5) Georgia Farm Report, a semi-monthly publication containing various crop, livestock, price and other farm data. The annual charge for these publications is: Weekly Weather and Crops, $12; Weekly Broiler Report, $15; Georgia Agricultural Facts, $5; Georgia Poultry Facts, $5, and Georgia Farm Report, $10. Reports are available free of charge to farmers and agri-business firms who provide the basic data on which reports are based. Within availability constraints, a copy of the Georgia Agricultural Facts and Poultry Facts is available to Georgia residents without charge. An order form may be obtained by calling (404-546-2236) or writing the Georgia Crop Reporting Service.
